

EVENT DESCRIPTION

Project Partner: City of Gdansk/BAPE

Title of the event: Working group meeting

Date & location: 22 February 2017, Gdansk (Poland)

Organiser(s): City of Gdansk

Number of Participants: 4

Summary

The meeting served to collect data on the refurbishment of lighting systems in large buildings belonging to the municipality (schools, kindergartens) to LED technology.

Objectives & main programme points

The aim of the working group meeting was to discuss issues relating to the modernisation of the indoor lighting in educational buildings belonging to the city (schools, kindergartens). Representatives of the Directorate for Development of the City of Gdansk (the city company responsible for carrying out the investments) emphasised that the replacement of indoor lighting in such buildings is only carried out as part of comprehensive modernisation projects of the buildings. Therefore, there are very few examples of such undertakings. The most recent example of this type of action is the replacement of lighting in a youth hostel belonging to the school on Subisława street in Gdansk.

Conclusions & lessons learnt

Key findings:

1. The Directorate for Development of the City of Gdansk is to collect the technical data regarding the modernisation of lighting in the youth hostel at the Sports School on Subisława Street in Gdansk
2. The data on the project will be complemented
3. Energy costs, savings and environmental effect will be analysed.
